

IDEATION PHASE – 1

Leave Approval System using ServiceNow

1. Project Title

Leave Approval System

2. Project Overview

The Leave Approval System is a workflow automation application developed on the ServiceNow platform. The system is designed to simplify and automate the process of managing employee leave requests. Employees can submit leave applications online, and managers can review, approve, or reject requests through an automated approval workflow. The system maintains all leave records in a centralized database, ensuring transparency, efficiency, and easy tracking of employee leave information.

3. Problem Statement

In many organizations, leave requests are still managed through emails, spreadsheets, or paper-based forms. These traditional methods are inefficient and often result in delays, data inconsistency, lack of transparency, and increased administrative workload. Employees face uncertainty regarding the status of their requests, while managers struggle to track and manage multiple leave applications. Therefore, there is a need for an automated solution that streamlines the leave management process.

4. Need for the Project

Organizations require a reliable system to manage employee leave requests efficiently. Manual leave management processes can lead to approval delays, record maintenance issues, and communication gaps. By automating the process, organizations can improve productivity, reduce paperwork, enhance employee satisfaction, and maintain accurate records of all leave-related activities.

5. Project Objectives

The primary objectives of the Leave Approval System are:

- To automate the leave request process.
- To reduce manual intervention in leave approvals.
- To provide employees with an easy-to-use leave application portal.
- To enable managers to approve or reject leave requests efficiently.
- To maintain a centralized repository of leave records.
- To provide real-time status tracking of leave requests.
- To improve transparency and communication between employees and managers.

- To send notifications regarding leave request decisions.
-

6. Proposed Solution

The proposed solution is a ServiceNow-based Leave Approval System that automates the entire leave management lifecycle.

The system will:

1. Allow employees to submit leave requests.
2. Validate leave dates before submission.
3. Route requests automatically to managers using Flow Designer.
4. Allow managers to approve or reject requests.
5. Update leave request status automatically.
6. Generate notifications based on approval decisions.
7. Store all leave information in a centralized database.

This automation eliminates manual processing and improves overall organizational efficiency.

7. Stakeholders

Employees

- Submit leave requests.
- View leave request status.
- Receive approval or rejection notifications.

Managers

- Review leave requests.
- Approve or reject requests.
- Provide comments when necessary.

HR Department

- Monitor employee leave records.
- Generate reports.
- Ensure compliance with leave policies.

System Administrators

- Manage application configuration.
- Maintain workflows.

- Handle system security and user access.
-

8. Functional Requirements

Employee Functions

- Submit leave requests.
- Select leave type.
- Enter start date and end date.
- Provide leave reason.
- Track request status.

Manager Functions

- Receive approval requests.
- Review leave details.
- Approve requests.
- Reject requests.
- View leave history.

System Functions

- Validate leave dates.
 - Trigger approval workflow.
 - Update request status.
 - Store leave records.
 - Generate notifications.
-

9. Non-Functional Requirements

Security

Only authorized users can access the system.

Reliability

The system should accurately process leave requests without data loss.

Performance

The application should process requests quickly and efficiently.

Usability

The user interface should be simple and user-friendly.

Scalability

The system should support increasing numbers of employees and leave requests.

Availability

The application should be available whenever employees need to submit leave requests.

10. Key Features

Leave Request Form

Employees can submit leave applications using a customized form.

Leave Type Selection

Different leave categories can be selected, such as:

- Casual Leave
- Sick Leave
- Earned Leave
- Emergency Leave
- Work From Home

Date Validation

The system ensures that the end date cannot be earlier than the start date.

Automated Approval Workflow

Flow Designer automatically routes requests to managers.

Status Tracking

The system tracks request status as:

- Pending
- Approved
- Rejected

Email Notifications

Notifications are generated whenever a leave request is approved or rejected.

Centralized Database

All leave records are stored securely within ServiceNow.

11. Technology Stack

Component	Technology
Platform	ServiceNow Developer Instance
Application Scope	Global
Update Set	Global
Workflow Tool	Flow Designer
Database	ServiceNow Tables
Validation	Client Scripts
Automation	Business Rules
Notifications	Email Notifications

12. Expected Benefits

For Employees

- Easy leave application process.
- Faster approval responses.
- Real-time status visibility.

For Managers

- Simplified approval process.
- Better tracking of employee leave requests.

For Organization

- Reduced paperwork.
 - Improved operational efficiency.
 - Better record management.
 - Increased transparency.
-

13. Expected Outcome

The Leave Approval System will provide a fully automated solution for managing employee leave requests. Employees will be able to submit leave requests through a ServiceNow portal, while managers can review and approve or reject requests through an automated workflow. The system will improve efficiency, reduce administrative effort, enhance transparency, and maintain accurate leave records.

14. Conclusion

The Leave Approval System is an effective workflow automation solution that addresses the challenges of traditional leave management processes. By leveraging ServiceNow's capabilities such as custom applications, Flow Designer, notifications, and workflow automation, the system provides a streamlined and user-friendly approach to handling employee leave requests. The project enhances productivity, ensures transparency, and contributes to better organizational management.
