

Project Planning Schedule

Leave Approval System Using ServiceNow

Day 1: Requirement Analysis and Project Planning

- Analyzed the project requirements and identified the challenges in the manual leave management process.
 - Defined project objectives, scope, and expected outcomes.
 - Identified stakeholders such as Employees, Managers, and Administrators.
 - Designed the system architecture and workflow process.
 - Planned the project timeline and implementation strategy.
-

Day 2: Application and Database Development

- Created the Leave Approval System application in ServiceNow.
 - Configured the application scope and update set as Global.
 - Created the Leave Request table.
 - Added fields such as Employee, Manager, Leave Type, Start Date, End Date, Reason, Status, and Manager Comments.
 - Configured choice values for Leave Type and Status fields.
-

Day 3: Form Design and Validation Development

- Designed the Leave Request form layout.
 - Arranged fields for better user experience.
 - Developed Client Scripts for date validation.
 - Implemented validation rules to ensure that the End Date is not earlier than the Start Date.
 - Tested form functionality and validation scenarios.
-

Day 4: Workflow Development Using Flow Designer

- Created the Leave Approval Flow in Flow Designer.
- Configured the Record Created trigger for the Leave Request table.
- Added the Ask For Approval action.
- Configured the approval process to route requests to the selected manager.
- Tested approval record generation.

Day 5: Approval Logic and Notification Development

- **Configured approval and rejection conditions.**
- **Implemented automatic status updates for Approved and Rejected requests.**
- **Configured email notifications for approval and rejection scenarios.**
- **Added dynamic employee details in notification emails.**
- **Verified notification generation.**

Day 6: Testing and Debugging

- **Tested leave request submission functionality.**
- **Tested manager approval and rejection processes.**
- **Verified status updates and approval records.**
- **Fixed workflow configuration issues.**
- **Performed end-to-end testing of the complete system.**

Day 7: Documentation and Project Completion

- **Prepared project documentation including Planning, Design, Development, and Testing phases.**
- **Verified all project requirements and functionalities.**
- **Conducted final review and validation.**
- **Prepared the project for demonstration and submission.**
- **Successfully completed the Leave Approval System implementation.**

Project Outcome

The Leave Approval System was successfully developed using ServiceNow. The system automates leave request submission, manager approval/rejection, status tracking, and email notifications. It reduces manual effort, improves transparency, and provides an efficient leave management process for organizations.
